THE ULTIMATE KEY CONTROL MANAGEMENT SYSTEM

KEY MONITOR SYSTEMS

THE KEY MONITOR SYSTEM

An easy to use wall mounted system, offering total control and complete management of keys and their use.

The Key Monitor houses all of a venues' keys and may only be accessed by authorized personnel after entering their valid means of identification.

Only keys programmed as available to a particular user are shown on the Key Monitor touch screen for release. All other keys are electronically held within the cabinet.

A virtually unlimited number of users and their various access levels may be programmed into the Key Monitor on-board computer.

Keys may be individually timed and alarmed, ensuring attention is drawn to keys not removed or returned at a designated time.

A complete record of system operations is retained within an Event Log, which is able to be viewed on screen or by print out.

A battery backup ensures all functions and programs are retained in the case of mains power failure.
